Blaze Kotsenburg — u0676062 — u0676062@utah.edu

Feedback Group Members:

Zack Cuttler, Hanna Bruns, & Joshua Morrell

- Optimal picks for the chosen year, dial in objective of what we want to display
  - **This is covered in the overall view of our project.**
- Perhaps generate predictions (projections of future games)
  - **If time allows, we will use another data set which includes live info and predictions.**
- Maybe a suggested list of players
  - **No, as of now we don't have live data so we would not be able to give a current list of suggestions.**
- Agree with line graphs for progression [Comment]
  - Parallel coordinate graph for comparing players (another option)
    - **Seems like a good idea but doesn't help with our data set. (Might clutter the data)**
- Tool tips
  - **We will be implementing the tool tips for the line graph and the overall view (and wherever it seems appropriate).**
- Create a roster to save players wanted (create your own roster)
  - **No, we would rather spend time on getting live predictions.**
- Present data would be nice (making projections, more applicable)
  - Make use of nflscrapR library for live data (possible option)
  - How projectections matches the outcome
    - **This would be nice and we're hoping we have enough time to add this to our project.**
- A way to view trends, story telling
  - **We're thinking of an effective way to tell a story with our data.**
